Amendments to the Claims:

Please cancel claims 57-62 and add new claims 63-68 as follows. The following listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

5

10

Claims 1-62 (Cancelled).

Claim 63 (New). A printing information distribution apparatus which is adapted to be operably connected to portable information terminals and printers through a communication network, the apparatus comprising:

means for storing items of print information;

means for transmitting to one of the portable information terminals through the communication network a printing reservation screen image which makes a user of the one of the portable information terminals input a reservation request for printing a selected item or items of the print information stored in the print information memory and identification of the one of the portable information terminals;

means for storing the reservation request and the identification of the one of the portable information terminals which are input by the user and transmitted through the communication network; and

distribution means, in response to an input identification of a portable information terminal transmitted from one of the printers, for reading a reservation request from the reservation request and identification storing means which corresponds to the input identification, reading an item or items of print information from the print information storing means which corresponds to the read reservation request, and transmitting the read item or items of print information to the one of the printers.

Claim 64 (New). The printing information distribution apparatus according to claim 63, wherein

the printing reservation screen image makes the user input the reservation request, the input identification, and a print format;

the reservation request and identification storing means stores the reservation request, the input identification, and the print format; and

5

10

the distribution means reads the reservation request and
the print format from the reservation request and identification
storing means which corresponds to the input identification,
reads an item or items of print information from the print
information storing means which corresponds to the read
reservation request, modifies the read item or items of print
information based on the read print format, and transmits the
modified item or items of print information to the one of the
printers.

Claim 65 (New). The printing information distribution apparatus according to claim 63, wherein

the printing reservation screen image makes the user input the reservation request, the input identification, and a print medium selection;

the reservation request and identification storing means stores the reservation request, the input identification, and the print medium selection; and

the distribution means reads the reservation request and the print medium selection from the reservation request and identification storing means which corresponds to the input identification, reads an item or items of print information from

10

the print information storing means which corresponds to the read reservation request, modifies the read item or items of print information based on the read print medium selection, and transmits the modified item or items of print information to the one of the printers.

Claim 66 (New). A printing information distribution apparatus which is adapted to be operably connected to portable information terminals and printers through a communication network, the apparatus comprising:

- a print information storage device which stores items of print information;
 - a transmitter which transmits to one of the portable information terminals through the communication network a printing reservation screen image which makes a user of the one of the portable information terminals input a reservation request for printing a selected item or items of the print information stored in the print information memory and identification of the one of the portable information terminals;
- a reservation request and identification storage device

 which stores the reservation request and the identification of

the one of the portable information terminals which are input by the user and transmitted through the communication network; and

a distribution device which, in response to an input identification of a portable information terminal transmitted from one of the printers, reads a reservation request from the reservation request and identification storage device which corresponds to the input identification, reads an item or items of print information from the print information storage device which corresponds to the read reservation request, and transmits the read item or items of print information to the one of the printers.

Claim 67 (New). The printing information distribution apparatus according to claim 66, wherein

the printing reservation screen image makes the user input the reservation request, the input identification, and a print format;

the reservation request and identification storage device stores the reservation request, the input identification, and the print format; and

the distribution device reads the reservation request and

the print format from the reservation request and identification

15

5

storage device which corresponds to the input identification, reads an item or items of print information from the print information storage device which corresponds to the read reservation request, modifies the read item or items of print information based on the read print format, and transmits the modified item or items of print information to the one of the printers.

Claim 68 (New). The printing information distribution apparatus according to claim 66, wherein

the printing reservation screen image makes the user input the reservation request, the input identification, and a print medium selection;

the reservation request and identification storage device stores the reservation request, the input identification, and the print medium selection; and

the distribution device reads the reservation request and
the print medium selection from the reservation request and
identification storage device which corresponds to the input
identification, reads an item or items of print information from
the print information storage device which corresponds to the
read reservation request, modifies the read item or items of

print information based on the read print medium selection, and transmits the modified item or items of print information to the one of the printers.
